

UL Readiness Test

Are you really ready for UL?

Over 95% of all UL Certification projects end in **FAILURE!**
Are you really ready for UL?

UL Failures: Honestly, it's not UL's fault. Most companies simply are not properly prepared when submitting their product to UL. There is a lot more to it than using UL certified components. Take the *UL Readiness Test* to determine if you are ready:

UL Readiness Test

- Do you know what UL standard(s) apply to your products?
- Do you own the current edition of these UL standards?
- Do your design engineers know the requirements in the UL standards?
- Are you really ready?

If you answered NO to any of these questions, you are not ready for UL.

Non-Compliance Results:

- Do you know what happens when your product doesn't comply? You get a "Non-Compliance Report" that simply lists the problems.
- Do you know what happens next? After you redesign the product, you have to report your changes and go through the UL project again - more time and money..... and then hope that you don't get another "Non-Compliance Report".

A Better Way:

- A pre-compliance review by a Senior Compliance Engineer is a quick, easy way to determine where you stand. And a lot less expensive than failing the official project. Save time, money, and aggravation. Why would you do it any other way?

**A preliminary review can go a long way towards compliance.
CertifiGroup staff include former Senior UL Engineers who KNOW the right way.
In as little as 1 week, you can know too.**
